CV629 Light-Weight Dispensing Valve for Adhesives and Silicones

Weighing only 4.8 oz (135 gm), the CV629 cartridge valve is one of the few valves that can be comfortably held in the hand without stress. Suitable for lubricants, silicones and adhesives, it is ideal for manual operations where an operator needs to apply frequent dispensing deposits.

The valve is also recommended for integration in an automated system, such as an I&J Fisnar Inc. dispensing robot, where the quick change one-piece cartridge seal ensures minimal maintenance and reduced down time.

Stroke is adjustable and the valve is recommended for micro shots or fine-beads. Maximum fluid pressure is 300psi making it suitable for a wide variety of low to high viscosity fluids.

For further information on all of our dispensing solutions contact I&J Fisnar Inc.
