I&J7900-LF Dispensing Robot – Upgrade to Bench Automation

I&J Fisnar Inc. remains dedicated to provide an automated solution to upgrade any manual dispensing application carried out on a bench. The company is convinced that the only obstruction is the project management time needed to assess and justify the transition from hand to automatic dispensing.

For this reason I&J Fisnar Inc. is offering two incentives during the Assembly Technology Expo. The first is to provide an attractive price for a sophisticated and powerful RoHs compliant bench robot, model I&J7900-LF. The special pricing will be announced during the show and is designed to attract companies that are still manually dispensing. The second incentive is a free video trial service, whereby I&J Fisnar Inc. will program a manual job and advise on the process of automation.

A company that takes advantage of this special offer will cut the cost of ownership and eliminate the trial and error period otherwise necessary. The company can then enjoy the benefits of production automation and the cost savings in material and labor, together with an appreciable reduction in rejects and rework.

For further information on all of our dispensing solutions contact I&J Fisnar Inc.
