I&J9000 Gantry Robot – For Metering & Mixing and Spray Applications

I&J Fisnar gantry robots are heavy duty machines ideal for integrating with two-part fluid metering and mixing systems. The I&J9000 series of machines are Cartesian gantry designs selected for a conveyor fed process or when it is desirable that the robot movement is above the work, such as in a spray application.

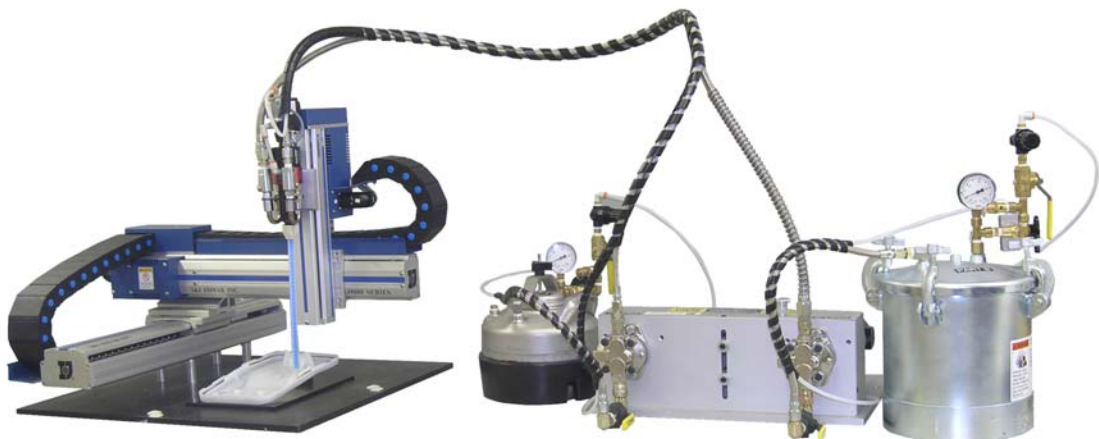

A remote meter and mixing head unit can be mounted on the robot's z-axis arm, which is capable of carrying up to 7Kgms running at 1000mm/sec.

I&J Fisnar gantry robots are capable of storing up to 100 programs of 3000 points per program. Repeatability of 20 microns and resolution of 10 microns make the I&J9000 suitable for very fine dispensing operations in addition to larger applications of up to 800mm x 600mm (larger on request).

Gantry robots are available in several sizes to suit most any dispensing requirement and are available with a wide range of dispensing accessories. They are easy to program using the unique I&J Fisnar dispensing software and a no charge video trial service is available to help evaluate your process.

For further information on all of our dispensing solutions contact I&J Fisnar Inc.
