## **I&J Fisnar Inc introduce RoHS economically priced Digital Fluid Dispenser SL101**

I&J Fisnar Inc is pleased to announce the introduction of an economic RoHS compliant CE mark Digital Dispenser. The model SL101 continues with I&J policy of manufacturing high quality state-of-art dispensing products at an affordable price.

The SL101 is a self-teach Bench Top Dispenser with a bright LCD and 10 memory locations to automatically cycle 10 self-taught programs. Auto-cycling is one of three operation modes available. The other two are: Manual-Mode, enabling a dispense operation controlled by a foot-pedal and Timed-Mode that will dispense a pre-set time.

Touch sensitive controls program the SL101 with dispense periods from 0.01 – 9999 seconds. Systems are available in 110V and 220V versions. Air Input is 70 – 100 psi (5 -7 bar). Dispense output air pressure can be programmed from 1 – 100 psi. An adjustable suck-back feature prevents post-dispense dripping of low viscosity fluids and potential oozing of higher viscosity creams.

Auto-cycling operates by sequencing a self-taught cycle of events including a dispense-time together with a wait or pause condition between the cycles. This feature enables the SL101 to be used as a stand-alone semi-automated dispensing system. Alternatively the SL101 can be controlled remotely or integrated with any I&J series robot dispensing from syringes or controlling a pneumatically actuated I&J valves.

For further information on all of our dispensing solutions contact I&J Fisnar Inc.
