

Press Release

September 9, 2009

### **Solar Module Gantry Robots – System 9000**

**System 9000** is a series of assembly and dispensing robots supporting customized in-line panel module production services. Products are available in 3 or 4 axis configurations up to 16ft (5m) in either X or Y. These heavy duty machines are easily integrated into any production line. Programming is in high level language and programs can be automatically selected from bar code input during the process.

System 9000 is ideally suited to a modular in-line system of production, reducing costs and providing increased flexibility for moderate to high production requirements.

Fisnar is a global supplier offering a fully integrated panel manufacturing solution and a full range of dispensing systems including, single part silicone, UV cure, RTV sealing, two-part automated metering and mixing for encapsulation together with Hot Melt integration.

Local engineering support is available through Fisnar companies and distributors in the USA, Europe and Asia.
