Thermadose® Hot Melt Systems from I&J Fisnar Inc

I&J Fisnar Inc is pleased to announce the launch of its Thermadose® range of I&J Fisnar Hot Melt systems and accessories for industrial Hot-Melt pressure sensitive and contact adhesives. All models are available in non-adhesive versions to apply substances requiring sterile conditions.

Popular bench mounted “Tank” style Hot-Melt controllers are designed to handle pellet, brick and flake adhesives in 12, 14 and 34 lb capacities.

Heavier duty 5 gallon and 55 gallon drum systems include a smooth easy-clean heating platen or an optional spiral-grid that increases the surface area and improves heating efficiency and control for high-flow and hard to melt materials. An automatic elevator raises the drum during process, eliminating safety handling issues and providing easy drum change without residue blow-out, simply position the drum, close the door and the automatic controls handle the process.

Crossover configurations for constant product flow are offered either as 55/5 gallon or 55/55 gallon systems.

Controls are simple to learn and all systems include in-house designed and machined gear-pumps, hoses and accessories to maintain quality standards.

Bench or floor systems can be simply integrated to any I&J Fisnar Gantry, SCARA or Desktop robot.

Optional Wet Testing is offered on any I&J Fisnar automated system.

Accessories include, high grade heated hoses, hand-guns, tip-sealing applicator valves, swirl, shot and bead nozzles.
