

SL101N

Digital Dispenser

An automatic digital dispenser with a bright LCD display and “teach & learn” process programming. Up to 9 independent dispensing programs may be stored for fast recall.

The SL101N has three modes of operation. The first is autocycling, which operates by sequencing a self-taught cycle of events including a dispense time together with a wait or pause condition between the cycles. This feature enables the SL101N to be used as a stand-alone semi-automated dispensing system. Manual-mode enables a dispense operation to be manually controlled by a foot pedal, and Timed-mode dispenses at a pre-set time.

Features

- Digitally controlled programming
- Wide range of applications
- Barrel suck-back ensures no dripping
- Stores up to 9 dispensing routines
