General Information

Overview

The DCD dual cartridge dispenser provides the dispensing of 2-part materials from standard 50ml, 200ml and 400ml 2-part, side-by-side cartridges.

Available models:

<table>
<thead>
<tr>
<th>Cartridge Size</th>
<th>DP50-1</th>
<th>DP200-1</th>
<th>DP400-1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Digital Timer</td>
<td>Sold Separately</td>
<td>Sold Separately</td>
<td>Sold Separately</td>
</tr>
</tbody>
</table>

Available modes of use include:

- Foot pedal actuated, operator shot control, dispensing from a mixing nozzle.
- Foot pedal actuated, operator shot control, dispensing from a pinch tube valve.
- Foot pedal actuated, timed shot control, dispensing from a pinch tube valve (external dispenser control box with digital display timer required).

The system may ship with 50ml, 200ml or 400ml size dispenser tool. The dispensing tool comes with its own instruction manual, and should be read before attempting to use this equipment.

The pinch tube valve comes with its own instruction manual, and should be read before attempting to use this equipment.

If an external dispenser (i.e. model SL101N or DC100) option is purchased, it comes with its own instruction manual, and should be read before attempting to use this equipment.
Limitations of Use

Please read this document and all information regarding the equipment before handling the equipment.

Do not use this equipment for anything other than its intended use. Do not modify, change, or alter the equipment in any way. Attempts to alter or modify this equipment will void the warranty.

If you are unsure of the intended use and the limitations of use for the equipment, contact your Fisnar representative before handling the equipment.

This instruction manual pertains to an unmodified standard system, and does not include any changes made to suit a particular application.

Owners Responsibility

The owner of the equipment is under obligation to read and adhere to all operation manuals & ensure that all personnel who will handle, install, maintain, operate, fix, and work around the equipment are qualified, trained, and up-to-date with all information regarding the equipment.
Safety Precautions

Read all operation manuals carefully prior to handling any piece of equipment.

![CAUTION]

Eye protection required.

Wear protective equipment such as glasses, gloves, clothing, and mask as recommended by the material manufacturer.

![CAUTION]

Mechanical hazard
Electrocution hazard. Avoid contact.

Use caution with hands and fingers while adjusting mounting collars.

The MSDS (material safety data sheet) of the material being dispensed should be read completely before being used.
The following cautions apply:

- The system should only be operated by experienced personnel in accordance with industrial safety regulations.
- Use only within the intended use of the machinery.
- In the event of accident or malfunction, disconnect air pressure lines.
- Ensure that the unit is securely positioned on a flat surface which will support the weight of the system.
- Supply compressed air according to the system specifications.
- Operate the unit in a safe and secure area.
- The unit should only be operated by trained and qualified personnel.
- Cleaning and inspection of the unit should only be performed after disconnecting the air pressure supply.
- Check for any hindrance of other apparatus that may interfere with the unit before operation.
- Install at a safe distance from other equipment.
- The unit is considered properly packed for transport when repacked as it was received.

Maximum Air Pressure

The maximum dispense air pressure is 87psi for the 50ml, 200ml and 400ml dispensing tools. This is adjusted and displayed on the front of the control box.

The maximum input air pressure for the DCD is 100psi. This is adjusted and displayed on the rear of the control box.

Please see separate operation manuals for any additional equipment purchased.
Equipment Overview

Components

The DP50-1, DP200-1 and DP400-1 carton includes:

- **Main Equipment included:**
  1. Base and stand assembly with control box
  2. Pinch tube valve (model 710PT-LF)
  3. Pneumatic Foot Pedal

- **Sold Separately:**
  1. Model SL101N or DC100 Metered controller with digital timer display sold separately with all models DP50-1, DP200-1 and DP400-1.
Not included: Material cartridges.

2. 50ml, 200ml or 400ml dual cartridge dispense tool

3. Foot pedal
• **Accessories**

- Controller-to-Compressor Air Line
- Controller-to-Dispense Tool Air Line
- Controller-to-Foot Pedal Air Line
- Plugs

• **Consumables**

- Nozzle Retaining Nut (p/n: EAUM-10-PP) – x10
- Static Mixing Nozzles (DP200-1 and DP400-1) (p/n: EA05-32YLL) – x10
- Pinch Tubes (p/n: S80037A – x10)
- Luer-Lock Tip Adapters (p/n: EA05-00L) – x10
- Sample Tips Kit (p/n: QK-NSK)
Controls

Set-up

Position Adjustment

Carefully unpack all components and save all packaging materials for later use.

The DCD unit comes pre-assembled with the pneumatic cartridge dispenser already mounted. Set the DCD on a stable surface, designed to handle the weight.
The stand is mounted to the base using the four (4) bolts (shown below) at the rear of the unit. The stand may be positioned fully to the rear, or in the forward mounting holes as shown. Ensure that all bolts are firmly tightened.

The pneumatic cartridge dispenser will already be mounted into one of the preassigned holes but can easily be removed to raise or lower the nozzle to better suit your application.
Adjust the dispenser angle of the dispense tool to position the tip at the desired position.
Pneumatic Connections

- Dispense Tool Connections

Instructions:

1. Connect the Controller-to-Dispense Tool airline(s) to the Dispense Tool pneumatic ports. Please take note of the Dispense Tool you are using (refer to pictures below).

![Controller-to-Dispense Tool Pneumatic Line](image1)

![50ml Dispense Tool Pneumatic Port](image2)

![200ml/400ml Dispense Tool Pneumatic Ports](image3)
Note: The 50ml dispense tool has a manual mechanical retract. The connected pneumatic line is for the Dispense signal. It does not have a Retract port.

The 200ml/400ml dispense tool has an automatic pneumatic retract. The port on the right (refer to above picture for reference) is for the Dispense signal. The port on the left is for the Retract signal.
• Foot Pedal Connections

Instructions:

1. Connect the Controller-to-Foot Pedal pneumatic lines to their corresponding ports.

Note: The hoses are labeled to match the appropriate air connections.
• Control Box Connections

Instructions:

1. Connect the Controller-to-Compressor pneumatic line to the MAIN AIR IN port.

2. Connect the Controller-to-Dispense Tool pneumatic lines to their corresponding ports.
3. Connect the Controller-to-Foot Pedal pneumatic lines to their corresponding ports. Please take note of the difference when using a valve (refer to pictures below).
4. Connect the valve operating pneumatic line (if applicable) to its corresponding port. Please take note of the difference when using the digital timer controller (refer to pictures below).
5. Plug or short the remaining unused ports. Please take note of the difference when using a valve and the dispense tool size used (refer to pictures below).
When Using the 50ml Dispense Tool
Material Connections

Instructions:

1. Connect the Luer-Lock Tip Adapter to the Static Mixer.

2. Connect the dispense tip directly to the adapter or to the pinch tube. Please take note of the difference when using a valve (refer to pictures below).

Note: The Luer-Lock Tip Adapter self-threads to the stepped outlet of the static mixer.
Loading the Material Cartridge

Instructions:

1. Ensure the AIR ON/AIR OFF switch is set to the AIR OFF position, and that the RETRACT/DISPENSE switch is in the RETRACT position.

2. Supply air to the rear of the control box into MAIN AIR IN.

3. Set the AIR ON/AIR OFF switch to the AIR ON position. Set the INPUT PRESSURE to 60psi by turning the INPUT ADJUST knob.
4. Set the DISPENSE PRESSURE to 10psi. If the Control Box is configured for valve use, then the pistons of the dispense tool will retract right away. If not, press the foot pedal to retract the pistons. Increase the DISPENSE PRESSURE by turning the DISPENSE ADJUST KNOB if necessary.

Note: A slight air leak may be heard from the Dispense Tool when it is fully retracted and the RETRACT signal is still ON. This is normal and should not be a cause for alarm.

5. Remove any cartridge cap that may be in use, and connect a static mixing nozzle at the outlet.

6. If using the 50ml dispensing tool, pull the plunger to retract the pistons. Twist the holding ring.
7. Tilt the holder to accept the cartridge.

8. If using the 200ml/400ml dispensing tool, slide the material cartridge into the dispensing tool and tighten the mixing nozzle retaining nut. You are now ready to dispense.
Unloading the Material Cartridge

Instructions:

1. Set the RETRACT/DISPENSE switch to RETRACT position.

Note: A slight air leak may be heard from the Dispense Tool when it is fully retracted and the RETRACT signal is still ON. This is normal and should not be a cause for alarm.

2. If using the 50ml dispensing tool, pull the plunger to retract the pistons. Twist the holding ring and tilt the holder to release the cartridge.
3. If using the 200ml/400ml dispensing tool: If the Control Box is configured for valve use, the pistons of the dispense tool will automatically retract. If not, press the foot pedal to retract the pistons. Press the button release to push the cartridge out of the dispense tool.
Operation

Dispensing – No Valve Setup

Instructions:
1. Position the cartridge so that the pistons will enter and not impact the cartridge walls.

2. Move the AIR ON/AIR OFF switch to the AIR ON position.

3. Set the RETRACT/DISPENSE switch to the DISPENSE position.

4. Press the foot pedal and observe the pistons enter the cartridge. The material will proceed into and then exit from the tip of the static mixer.

5. Adjust the DISPENSE ADJUST knob until the DISPENSE PRESSURE dial reads sufficient pressure to dispense at the desired dispense rate.

6. Press the foot pedal to dispense.
Dispensing – Valve Setup

Instructions:

1. Position the cartridge so that the pistons will enter and not impact the cartridge walls.

2. Move the AIR ON/AIR OFF switch to the AIR ON position.

3. Set the RETRACT/DISPENSE switch to the DISPENSE position. The pistons will enter the cartridge right away to start the flow of material. The material will stall at the inlet of the pinch tube valve.

4. Press the foot pedal to open the valve and dispense.

5. Adjust the DISPENSE ADJUST knob until the DISPENSE PRESSURE dial reads sufficient pressure to dispense at the desired dispense rate.

6. Release the foot pedal to close the valve and stop the dispensing.
Technical Information

Specifications

DCD Dispenser Controller (excluding pneumatic cartridge holder)

- Operating Pressure: 87 psi maximum
- Compressed Air Supply: 100 psi maximum
- Air requirements: ISO 8573-1, 2.4.2
- Pressure Adjustment: Variable
- Pneumatic Connections: ¼ inch OD
- Weight without Foot Pedal: 32 lbs. (14.5 kg)
- Foot Pedal Weight: 4 lbs. (1.8 kg)

Pneumatic Dispense Tool

- Operating Pressure: 87 psi maximum
- Compressed Air Supply: 100 psi maximum
- Air requirements: ISO 8573-1, 2.4.2
- Pressure Adjustment: Infinitely variable
- Sound level: 83 dBA
- Weight:
  - DP50: 2.2 lbs. (1 kg)
  - DP200: 3.52 lbs. (1.6 kg)
  - DP400: 4.85 lbs. (2.2 kg)

Codes and Standards Applied:

- Compressed air quality class: EN ISO 8473-1:2000
- Pneumatic Connections: ¼ inch OD

Refer to the original manufacturer Operating Instruction Manual for details.

NOTES
Limited Warranty

Manufacturer warrants this product to the original purchaser for a period of two (2) years from the date of purchase to be free from defects in material and workmanship, but not against damages caused by misuse, negligence, accident, faulty installation, abrasion, corrosion or by not operating in accordance with factory recommendations and instructions.

Manufacturer will repair or replace (at factory’s option) free of charge, any component of the equipment thus found to be defective upon prepaid return of the equipment to the factory during the warranty period of the equipment. In no event shall any liability or obligation of Manufacturer arising from this warranty exceed the purchase price of the equipment. This warranty is valid only when 5 micron filtered compressed air is used.

The manufacturer's written liability, as stated herein, cannot be altered or enlarged except by a written statement signed by an officer of the company. In no event shall manufacturer be liable for consequential or incidental damages. A return authorization is required from FISNAR prior to shipping a defective unit to the factory.

Manufacturer reserves the right to make engineering or product modifications without notice.
