2. **UNPACKING AND INSPECTION**
Carefully unpack the valve and examine the items contained in the carton. These will include:
- Valve assembly.
- Mounting bracket and mounting screw.
- 1 x Disposable Material Path.
- 2 x Hex keys (1/8" & 9/64").
- Sample tip kit.
- Fluid line and air hose.
- User guide.

3. **DESCRIPTION**
The VD510-DP Diaphragm Valve is designed to dispense low to medium viscosity fluids. An internal spring return makes the valve fully adaptable for use with any time/pressure controller. A short opening stroke provides extremely fast, positive shut-off. An external stroke control adjustment makes it easy to fine tune shot sizes. The VD510-DP Diaphragm Valves compact design allows for mounting flexibility and easy integration into automated applications.

4. **THEORY OF OPERATION** (Refer to figure 2.0)
The VD510-DP Diaphragm Valve is normally closed, adjustable stroke valve. Input air pressure of **70-90 psi (4.8 to 6.2bar)** through air inlet port (1) drives the piston assembly (2) back, opening the material path, allowing fluid flow from the material inlet (3) to the material outlet (4). Relieving the input air pressure allows the piston return spring (5) to close the diaphragm (6), ensuring rapid “fail-safe” shut-off of fluid flow.

![Figure 2.0](image-url)
5. **SETUP INSTRUCTIONS**

Refer to Figure 3.0

Note: This installation uses Luer lock adapters shipped with the valve.

1. Connect the fluid feed tube or syringe to the fluid inlet port (1).  
   **Note:** Fisnar pressure tanks have a standard 1/4” OD feed tube. If one of these pressure tanks is used, a luer lock to 1/4” tube compression adapter will be needed. Please contact Fisnar for more info.

2. Connect the valve airline to the DC200 controller or other pneumatic device that is used to control the valve.

3. Connect the opposite end of the airline to valve air inlet (2).

4. Connect appropriate dispensing tip or nozzle to the fluid outlet port (3).

5. Set the valve controller pressure at **70 psi (4.8bar).**

6. Set the fluid pressure. **Do not exceed 60 psi (4.1bar).**

7. Make sure all connections are tight.

8. Place container under the outlet and activate the valve until the fluid flows steady.

The amount of fluid that flows through the valve is determined by:

- Valve open time
- Fluid reservoir pressure
- Dispensing tip size
- Stroke adjustment knob position

![Figure 3.0](image-url)
6. TYPICAL SYSTEM SET-UP

Optional Syringe Feeding

1. Attach optional syringe bracket as shown below.
2. Use insert rings for syringe sizes 3cc – 10cc.
3. Ensure syringe is under constant air pressure.

Note: Fisnar pressure tanks have a standard 1/4” OD feed tube. If one of these pressure tank is used, a luer lock to 1/4” tube compression adapter will be needed. Please contact Fisnar for more info.

Figure 5.0
7. DISPOSABLE MATERIAL PATH REMOVAL/REPLACEMENT:

Removal of a feed path assembly: Refer to figure 6.0
1. Release fluid pressure.
2. Remove syringe barrel or fluid line from the valve.
3. Loosen the lower receiver screws (4 - 5 turns) and pull out disposable material path.
4. Dispose of the used feed path assembly in an appropriate waste container.

Installation of a new feed path assembly: Refer to figure 6.0
1. Insert a new feed path assembly into the valve housing. Ensure correct fitment into the actuator.
2. Tighten lower receiver screws to torque setting specified below.

| Torque Specifications | 14 in lb. (1.58 N-m) |

Figure 6.0
8. MAINTENANCE OF AIR CYLINDER O-RING (Refer to figure 7.0 and 8.0)

1. Unscrew receiver screws (1).
2. Remove the DMP (2).
3. Remove the stroke control knob (3) and spring (4).
4. Remove the receiver assembly (5).
5. Remove actuator (6).
6. Remove retaining ring (7), anti-rotate washer (8) and Mylar washer (9).
7. Remove piston (10) from air cylinder (11).
8. Replace O-ring (12) if damaged; otherwise lubricate O-ring with Bimba HT-99, or equivalent.
9. Reinstall piston (10), retaining ring (7), anti-rotate washer (8) and Mylar washer (9).
10. Reinstall actuator (6) as per position in Step 4. 90° offset to the air inlet.
11. Reinstall receiver assembly (5), leaving receiver screws loose.
12. Reinstall spring (4) and stroke control knob (3).
13. Install DMP (2) and set torque on receiver screws. - 14 in lb. (1.58 N-m)

Vertical slot must face this way, 90° offset to the air inlet.

10. **LIMITED WARRANTY**

Manufacturer warrants this product to the original purchaser for a period of one (1) year from date of purchase to be free from defects in material and workmanship, but not against damages by misuse, negligence, accident, faulty installations and instructions. Manufacturer will repair or replace (at factory’s option), free of charge, any component of the equipment thus found to be defective, on return of the component, “PREPAID” to the factory during the warranty period. In no event shall any liability or obligation of the Manufacturer arising from this warranty exceed the purchase price of the equipment. This warranty is only valid if the defective product is returned as a complete assembly without physical damage. The Manufacturer’s liability, as stated herein, cannot be altered or enlarged except by a written statement signed by an officer of the company. In no event shall the Manufacturer be liable for consequential or incidental damages. A return authorization is required from Fisnar Inc. prior to shipping a defective unit to the factory.

Manufacturer reserves the right to make engineering product modifications without notice.

All returns must be issued with a Returns Authorization number, prior to return. Send warranty returns to:
